

Anyone Else See Sky Object?

Anyone who saw something strange in the sky yesterday is asked to get in touch with a University of Arizona physicist, Dr. James E. McDonald of the Institute of Atmospheric Physics.

McDonald said a competent observer saw an Unidentified Flying object (UFO) over the city yesterday. And McDonald is interested to find if others will verify the sighting.

McDonald said the observer reported seeing a luminous object at mid-afternoon move to the south, go around an aircraft and then vertically upward before flying on horizontally.
